

ALLERCETIN™

Allergy & Sinus Homeopathic Formula

For treatment of allergies, more is not always better. Safe, natural homeopathy utilizes only enough medicine to stimulate your body's natural defenses. ALLERCETIN provides homeopathic remedies to support multiple body systems involved with hay fever: respiratory system, sinuses, mucous membranes, histamine inhibition, immune desensitization, and cellular energy.

	Respiratory Inflammation	Histamine Inhibition	Immune Desensitization	Sinus Congestion	Mucous Membrane Inflammation	Cellular Energy
ACTION	About 10% of the population suffers from hay fever—allergic reactions of the mucous membranes of the nose and upper air passages to irritating substances. Hay fever symptoms are usually caused by pollen from trees, grasses, and other plants, such as ragweed. According to the Law of Similars, the following remedies can relieve the classic symptoms of hay fever, such as sneezing and runny nose, itching and watery eyes, and plugged ears.	Histamine 12x is at about the same concentration as intermediary metabolites in the body. It therefore affects histamine metabolism in two ways: 1) it stimulates the degradation of histamine by signaling the body that enough histamine has been produced, and 2) it turns off the switch on further production or release of histamine via feedback inhibition.	By repeatedly introducing minute amounts of allergens such as ragweed into the body, the immune system gradually acquires tolerance. This process increases the levels of IgG antibodies, which block IgE antibodies from binding to mast cells. As a result, less inflammatory chemicals such as histamine are released.	Head and sinus pains due to congestion are often a part of the picture of seasonal allergies. The following remedies address these symptoms according to the Law of Similars.	The tissue changes that occur during the inflammatory process result in depletion of potassium. Kali iodatum (potassium iodide) 6x is absorbed into the body at concentrations similar to those used by the body. It regulates cell membrane permeability and conduction of nerve signals.	The symptom of fatigue is frequently part of seasonal allergies. Succinic acid is part of the Krebs cycle and plays a role in the production of ATP, the body's energy molecule. It may therefore alleviate the symptom of fatigue that often accompanies hay fever.
CONTENT	Ambrosia (Ragweed) 30x, Euphrasia (Eyebright) 6x, Sabadilla 6x, Sticta pulmonaria 6x, Succinic Acid 12x	Histaminum hydrochloricum 12x (a component of HistaStop™)	Ambrosia (Ragweed) 30x, Quercetin 12x (a component of HistaStop™)	Kali iodatum 6x, Sabadilla 6x, Sticta pulmonaria 6x	Kali iodatum 6x	Succinic Acid 12x
