## **FOR IMMEDIATE RELEASE**

### **SOURCE NATURALS INTRODUCES L-CITRULLINE**

#### ***SUPPORTS BLOOD FLOW, SEXUAL FUNCTION***

May 31, 2006, Scotts Valley, California—Source Naturals presents L-Citrulline, an amino acid that supports cardiovascular health, liver function, and increase in nitric oxide levels.

Threshold Enterprises, Ltd. spokesperson Todd Williams says, “L-Citrulline’s main benefit is opening and relaxing the blood vessels. This action increases healthy blood flow, which in turn increases the oxygen and nutrients being transported throughout the body.”

L-Citrulline also helps to detoxify the body by converting toxic ammonia to urea so it can be excreted. L-Citrulline also increases the body’s nitric oxide levels. Nitric oxide helps the blood vessels relax. This increases blood flow, which enhances sexual function.

Williams explains, “L-Citrulline is a non-essential amino acid that is synthesized from other amino acids. The body converts L-arginine to L-citrulline, a byproduct of which is nitric oxide. The L-citrulline is also chemically recycled back into arginine in the endothelial cells of the blood vessels. Citrulline and arginine have similar benefits, but for healthy blood flow and nitric oxide production, citrulline is preferred because arginine gets diverted to many other less critical uses while citrulline’s main action and function is in the blood vessels.”

Source Naturals is committed to enhancing individual potential to enjoy optimal health and well being by providing superior quality dietary supplements and nutritional education. For more information, pricing or purchase locations, please visit <http://www.sourcenaturals.com>.
