

PsoriaClear™

Soothing Skin Rejuvenation

Strangely enough, the secret of soft, smooth, silky skin may be a prickly, thorny bush from the inhospitable mountains of Russia and northern China. The berries of sea buckthorn (*Hippophae rhamnoides*) are so rich in vitamins and nutrients that they were legendary in China, Russia, and Europe for centuries, but then were forgotten. After many years of being planted as a protective hedge—the thorns are apparently quite vicious—the sea buckthorn is being

rediscovered for its nutrients, and particularly, for its amazing properties in skin regeneration.

The oil of the sea buckthorn is one of numerous compounds in Source Naturals PSORIALCLEAR ointment, a formula that moisturizes and replenishes the skin cells. The bounty of the earth has been gathered for this unusual and effective topical ointment—a convenient, natural aid for healthy, glowing skin.

Strategies for WellnessSM

Legendary benefits

Pegasus, the magnificent flying horse of Greek mythology, was said to have obtained his phenomenal strength from sea buckthorn—berries and leaves so nutritious, they must have been cultivated by the gods on Mount Olympus. The plant became so identified with Pegasus and legendary racehorses, that sea buckthorn's botanical name, *Hippophae* means “shiny horse.” But beyond legend, the benefits of sea buckthorn were discussed in ancient texts such as the Tibetan *Rgyud Bzi*, by Greek healers Theophrastus and Dioskorid, as well as noted by the court physicians of the Tang Dynasty of China. Used in Russia, Poland, Germany, the Himalayas, and Scandinavia, the sea buckthorn was known throughout the eastern hemisphere and used in traditional herbalism for centuries. Products made from sea buckthorn are valued for their rejuvenating and restorative properties.

Scientific Confirmation

Modern studies confirm the nutritious qualities of sea buckthorn. The berries are a natural source of vitamins A, E, B-1, B-2, K, and P, as well as several carotenes, tocopherols, and flavonoids. The berries are second only to rose hips and acerola in vitamin C content. Most importantly for skin, however, the seeds of the sea buckthorn contain a very high content of essential fatty acids, oleic (C18:1), linoleic (C18:2), pentadecenoic (C15:1), palmitoleic

(C16:1), heptadecenoic (C17:1), linolenic (C18:3), eicosenoic (C20:1), eicosadienoic (C20:2), erucic (C22:1) and nervonic (C24:1). Its antioxidant qualities have also been confirmed in modern studies.

Natural Ingredients

The additional ingredients in PSORIA-CLEAR are natural components that could be found in many farms and forests worldwide: beeswax, animal fat, fatty acids, vitamin C and carotenoids.

Source Naturals is pleased to bring you PSORIALCLEAR, an easy-to-use topical ointment that has had tremendous success in supporting smooth, healthy, silky skin. Unlike many skin ointments, it is made with natural products; it contains no corticosteroids, hydrocortisone, nor paraffin. Use it as part of your own wellness program, taking charge of your own health and well-being.
