Source Naturals Introduces DuraFlora™ (Bacillus coagulans)

Highly Resilient Probiotic

Scotts Valley, CA- Source Naturals is pleased to bring into the marketplace, DuraFlora™, a beneficial probiotic which forms highly resilient structures that support healthy intestinal flora. Source Naturals spokesperson Tony Lucchesi says, "DuraFlora™, formerly known as Lactobacillus sporogenes, is a durable microorganism that may support digestive health through the production of lipase, an enzyme responsible for the breakdown of fats and oils."

Many flora products are not very stable and can die off and lose potency. Preliminary studies indicate that Source Naturals DuraFlora™ may be able to survive a variety of environmental conditions which potentially improves shelf stability of the product and viability of probiotic benefits.

According to Lucchesi, "Source Naturals DuraFlora™ addresses 2 of the 12 deep SystemiCare™ metabolic systems identified by Source Naturals as necessary for optimum health. These are Digestion and Immunity."

Source Naturals is committed to enhancing individual potential to enjoy optimal health and well-being by providing superior quality dietary supplements and nutritional education. For more information or purchase locations, please visit sourcenaturals.com.
