

ULTRA JOINT RESPONSE™

MSM and Glucosamine Complex

Many people are unaware that healthy joints and ease of movement are dependent on a variety of interrelated factors. ULTRA JOINT RESPONSE offers broad spectrum support to the musculoskeletal system with structural building blocks and tissue production cofactors. It also aids the body's mechanisms for soothing relief and antioxidant defense.

	Musculoskeletal System: Structural Building Blocks	Musculoskeletal System: Tissue Production Cofactors	Soothing Relief Mechanisms	Antioxidant Defense
ACTION	Structural building blocks (macronutrients) are necessary to help maintain the integrity of joints and connective tissue. Glucosamine and sulfur are essential building blocks of glycoproteins and proteoglycans, which help lubricate joints and nourish joint tissue . Both ingredients are supplied in the same amounts used in recent research. Sea cucumber, a significant source of proteoglycans, has been used traditionally in Asia for centuries.	Essential cofactors (micronutrients) catalyze the production of connective tissue . For example, vitamin C and copper assist in the formation of hydroxyproline and hydroxylysine, main constituents of collagen.	The body has natural mechanisms to increase comfort. Various soothing herbs, rich in polysaccharides and other constituents, assist in this process.	In the body's natural process of tissue renewal, prostaglandins, leukotrienes, and white blood cells can actually promote a cycle of free radical production. Antioxidants help break this vicious cycle by supporting the body's own natural antioxidant response, thereby helping maintain the health and integrity of joints and tissues .
CONTENT	Glucosamine Sulfate, MSM, Sea Cucumber	Copper, Manganese, Molybdenum, Zinc, Vitamins A, B-6 & C, Niacinamide	Aloe Vera, Ashwagandha, Boswellia Serrata, Horse Chestnut, Nettle, Quercetin, Turmeric, Copper	N-Acetyl Cysteine, Grape Seed, Horse Chestnut, Quercetin, Turmeric, Selenium, Zinc, Vitamins A & C, Beta Carotene
