

# Hyaluronic Acid

## Replenish Aging Skin from Within

Sometimes it takes internal changes to fight the visible signs of aging skin. Fine lines and sagging are symptoms of skin cells that have lost elasticity and moisture. But you can replenish aging skin cells internally by adding Source Naturals HYALURONIC ACID to your skin care regimen today.

Hyaluronic acid, one of the most important building blocks for taut, firm skin, retains moisture for a dewy complexion.

Source Naturals high potency HYALURONIC ACID provides the latest scientific breakthrough in anti-aging nutrients. It is made from patented BioCell Collagen II™ and processed into smaller components for better absorption. This hydrolyzed type II collagen provides hyaluronic acid and chondroitin sulfate to replenish aging skin.

## Anti-Aging Skin Nutrients

Hyaluronic acid is a vital component of skin. It provides a firm structure that holds moisture in for smoothness and elasticity. During aging, hyaluronic acid levels decline, affecting the look and health of skin, but they can be replenished.

Source Naturals high potency HYALURONIC ACID from patented BioCell Collagen II™ is scientifically formulated from 100% pure cartilage and has been awarded a U.S. patent for support of connective tissue, joints and cartilage. Source Naturals HYALURONIC ACID is processed to contain smaller, more bioavailable molecules of hyaluronic acid. And it supports healthy skin production to improve elasticity and reduce the appearance of wrinkles.

This breakthrough anti-aging formula contains collagen, hyaluronic acid and chondroitin sulfate to replenish aging skin from within.

## Replenish with Hyaluronic Acid

Scientists have studied hyaluronic acid for over 40 years. It is found throughout our bodies and is concentrated in our skin and joint cells. It is a glycosaminoglycan (GAG) that acts like a sponge to hold water in its strong matrix, keeping skin cells firm and smooth.

As we age, hyaluronic acid levels decline – but supplementation can help increase hyaluronic acid levels.

Hyaluronic acid can be used to strengthen the area around collagen, the most important structural component of skin. This replenished structure can tone and moisturize, pulling your skin tight and smooth over a strong foundation. The result: greater elasticity and reduced appearance of wrinkles.

## Chondroitin for Added Support

Chondroitin sulfate is a GAG (glycosaminoglycan) that provides structure and retains lubricating moisture in the joint matrix. In research studies, chondroitin supplementation promotes joint health by supporting the body's own repair process.

Source Naturals is proud to partner with your local health food store to bring you the latest anti-aging science. Hyaluronic acid, in this patented and highly assimilable form, acts like an internal cosmetic to help you achieve your goal of having radiant, young looking skin.
